

Embryo Transfer 2017-2018

Town & Country Vet at Astek Stud

We recommend that fresh or chilled semen is used to inseminate the donor mare as this increases the chance of success.

Charges Per Flush

Fresh / chilled AI in donor – 1 embryo implanted in recipient **\$2,400 per cycle**

Frozen AI in donor- 1 embryo implanted in recipient **\$3,000 per cycle**

These prices are for one cycle only.

Two recipient mares are to be supplied by the client.

Prices include programming and scanning of donor mare and two recipient mares.

Included are manual examinations, ultrasound scans (including 15, 28 and 42 day pregnancy scans), routine administration of medications for one oestrous cycle only.

These prices do not include any sedation, progesterone supplementation, caslicks, uterine irrigations, culture, cytology or biopsy and associated lab fees.

Flushed embryos can also be shipped to EquiBreed Cambridge for implanting in their recipient mares, or for freezing for later use.
